PROFILE

Informatics graduate focused on Frontend Development, Full-Stack Development, and Software Engineering. I enjoy turning ideas and problems into functional digital solutions through hands-on projects and continuous experimentation. My experience includes building web applications, developing a music recommendation system using machine learning, and working independently as well as in teams. I am particularly interested in learning through building, exploring new technologies, and improving solutions through research, testing, and iteration.

EDUCATION

Universitas Sanata Dharma – Yogyakarta, Indonesia
Bachelor of Computer Science (Informatics) | 2022–2026
GPA: 3.35 / 4.00

Relevant areas: Software Engineering, Web Development, UI/UX, Data Analysis, Database Systems, Artificial Intelligence

SELECTED PROJECTS

DissTrack – Audio Based Music Recommendation System
Thesis Project | Solo Researcher & Full-Stack Developer | 2026

- Built a web-based music recommendation system that recommends songs based on audio characteristics rather than relying on genre, lyrics, or title.
- Combined K-Means Clustering and Cosine Similarity to reduce the search space and improve the recommendation process.
- Worked with 176,774 songs and 9 audio features, and developed the recommendation logic using Python and Laravel through an HTTP API.
- Conducted research, experimentation, testing, and evaluation independently, achieving 20/20 successful functional test conditions.
- Learned to make technical decisions based on experimentation, research findings, and practical constraints.

E-Commerce Apparel Website
Personal Project | Solo Developer | 2026

- Designed and developed an e-commerce website concept inspired by modern apparel brands, with the goal of creating a foundation for a real apparel business.

- Built the frontend and implemented interactive functionality using JavaScript, while exploring cleaner code structure and reusable logic.
- Used online resources and AI as learning and problem-solving tools throughout development.
- Currently exploring backend development, payment-system integration, and a future migration to React.

Psychology Consultation Web Application
University Team Project | Frontend Developer

- Contributed as a frontend developer in a four-person team building a web application for psychology consultation.
- Worked with CodeIgniter 4 and collaborated with team members to translate requirements into web interfaces.
- Participated in development discussions and coordinated implementation with other members of the team.

TECHNICAL SKILLS

Languages	**:** JavaScript, PHP, Python, SQL
Frameworks	**:** Laravel, CodeIgniter 4
Development	**:** HTML, CSS, REST/HTTP API, Git, GitHub
Data & AI	**:** K-Means Clustering, Content-Based Filtering, Cosine Similarity, Data Analysis
Tools	**:** Figma, draw.io, Canva, Docker
Currently Learning	**:** React, Docker, AI Agents, LLM Applications

---

ADDITIONAL EXPERIENCE

Worked across various event roles, including Crew Area for PSSI U-10 & U-12 President Cup (2026), supporting field operations and coordinating with crew members, Liaison Officers, and referees; Publication, Decoration & Documentation (PDD) for SekarGeni (2025), supporting publication, decoration, and documentation activities; Tenant Crew for Magisfest, Universitas Sanata Dharma (2024), supporting tenant operations and interacting with visitors; and Public Relations (HUMAS) for an Informatics Program Event (2023), supporting communication and coordination between the committee and related parties
